

Multi-Node Fulfillment Strategy

Multi-Node Fulfillment Strategy

What Is Multi-Node?

Walmart's fulfillment network spans multiple locations across the US. Distributing your inventory across nodes can reduce delivery times and improve the customer experience.

- Walmart assigns inventory to fulfillment centers based on demand patterns
- Products stored closer to customers ship faster
- Multi-node distribution improves your Two-Day Delivery coverage
- Better geographic coverage means more customers receive fast delivery

Optimizing Distribution

Make the most of Walmart's multi-node network.

- Follow Walmart's recommended inventory distribution guidelines
- Send inventory to multiple designated fulfillment centers when possible
- Monitor regional delivery performance to identify coverage gaps
- Adjust inventory allocation based on regional demand patterns
- Work with your Walmart account manager for distribution recommendations
